Message

Enhancing the growth of the business of electronic store users by providing high-quality electronic solutions, through which the user can define the market and create reliable value and competitive advantage for its customers all over the world.

Vision

Providing a wonderful and convenient shopping experience for customers, improving the online shopping experience, and focusing on improving the efficiency of the sales, marketing, and management process through the use of the latest and providing comprehensive analytical tools and reports that help our customers understand and analyze data to improve performance and increase revenues.

Strategy

Our strategy for two years is to create a new experience for online stores that enjoy VR & AI, develop customer understanding of how to use these technologies, and develop a team of programmers and data analyzers to present this new experience to the local market and then try to export it to the international market.

Objectives

The goals for two years are to gain 25%: 30% of online store users through various platforms such as WordPress Income to Egypt and Saudi Arabia by providing exceptional solutions that will redefine the standards of online stores.

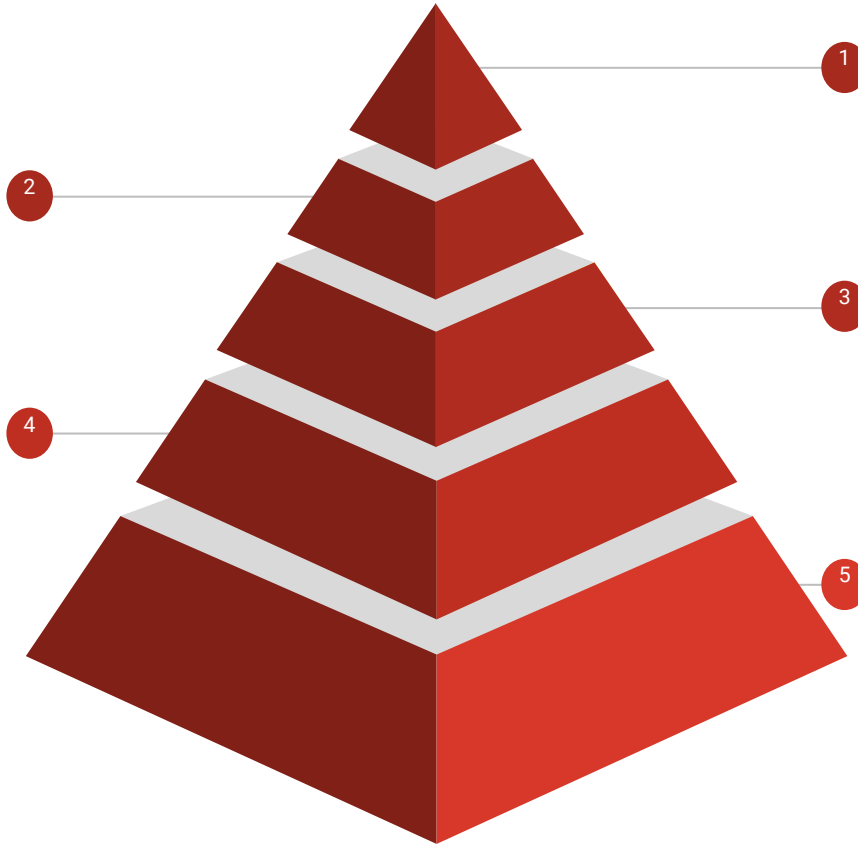

Function And. Purpose

60 second control panel

Through it, all stores can be controlled, including modifications, renewal of subscriptions, adding new templates, additions to payment, shipping, or otherwise. It is the main controller for the operating and technical support team for all 60 Seconds users.

UI/UX control toolkit

The tool kit manager can choose between more than 20 available templates and 200 section to choose between them to control the design of his store, and he can choose the method of displaying products - controlling fonts and colors - changing the store's sections.

Main interface 60 seconds

The visitor can choose the name of her store - create a new account in 60 seconds, and the member retrieves his password, logs in, communicates with the technical support team, or opens a new support ticket, which is the main destination for store owners and is always fed with updates and news and an explanation of how to use their store.

Store owner B2B / B2C

Store manager and supervisors control panel The store owner can assign some tasks to supervisors and can create sub-stores to add products entered into a store - he can control and modify the store's design and control additions such as payment methods - shipping methods linking with different social media sites

frontEnd visitor - members

this page corresponds to the store manager and is compatible with all browsers and mobile applications (Android / IOS) Visitors to the store, the owner, can, during this session, shop in the store, shop or return, payment methods, and shipping points.

Benefits 60 Sec:

- **Ease of management:** The application provides an easy-to-use management interface that helps the store manager to manage the store efficiently and without the need for special technical skills or software modifications and without prior training that does not require writing a line of code.
- **Customization flexibility:** The application allows the store manager to fully customize the store, as the company's brands, colors and fonts can be added, and the available payment options, prices, shipping companies, discounts and promotions can be specified.
- **Add products to your store:** The possibility of adding the product in more than one type (ordinary products - digital products - digital cards - restaurant food) with the ability to customize the number and quantity of each specific color or category.
- **Improving the user experience:** The application provides a convenient and easy experience for users, as customers can search for products and orders, pay safely and easily, and ship the product through the companies added to the platform.
- **Cost Savings:** The application saves costs related to the purchase and maintenance of store management software and tools, which saves clients additional costs.
- **Periodic updates:** Provides updates available in "Updates and Tools", which helps to stay up-to-date with the latest versions and available features for customer needs, security and protection.
- **Compatibility with different devices:** The application is compatible with various devices and platforms, allowing users to access the store from anywhere and at any time by being compatible with all browsers - and tablets - and mobile phones.
- **Revenue optimization:** The application helps customers improve revenue by providing users with an easy and convenient shopping experience, and improving the internal processes of store management.

Main interface 60 sec

Create an online store with 60 sec Builder — no coding required. Sell products, services, and subscriptions; collect donations; and receive payments through one of our more supported payment gateways.

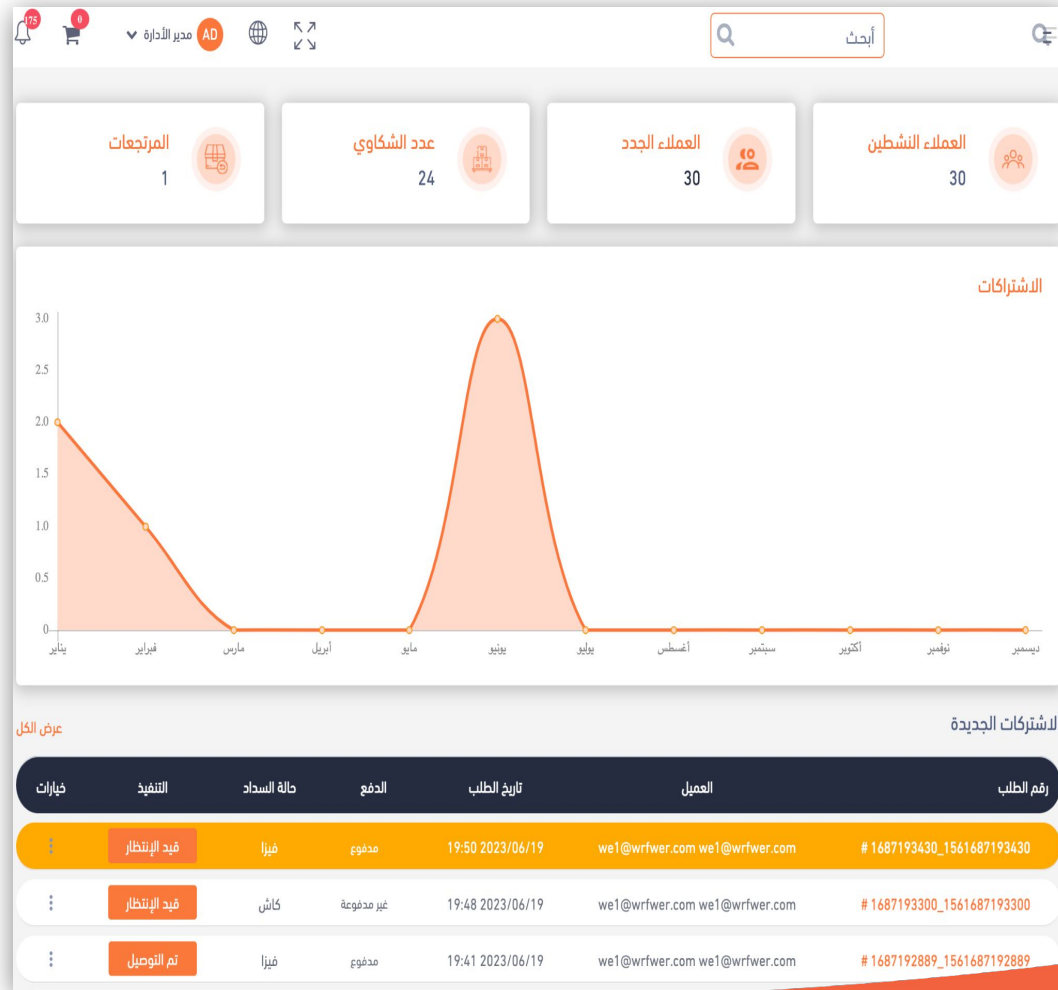

- The visitor can learn about the features of the platform and see the prices of the available packages.
- View platform news and developments in this period and in the future.
- Documentation to explaining the platform, text, images and videos.
- Create your store in steps not exceeding 60 seconds.
- User registration Log in to the store / Forgot password.
- Communicate with the technical support team through written chat or a special ticket for support or operation.

60 sec control panel

The control panel to display news and articles entered into the 60 Seconds portal. The store can be controlled through technical support and customer subscription management by operating, receiving and responding to complaints or the position of the subscriber manager in the system.

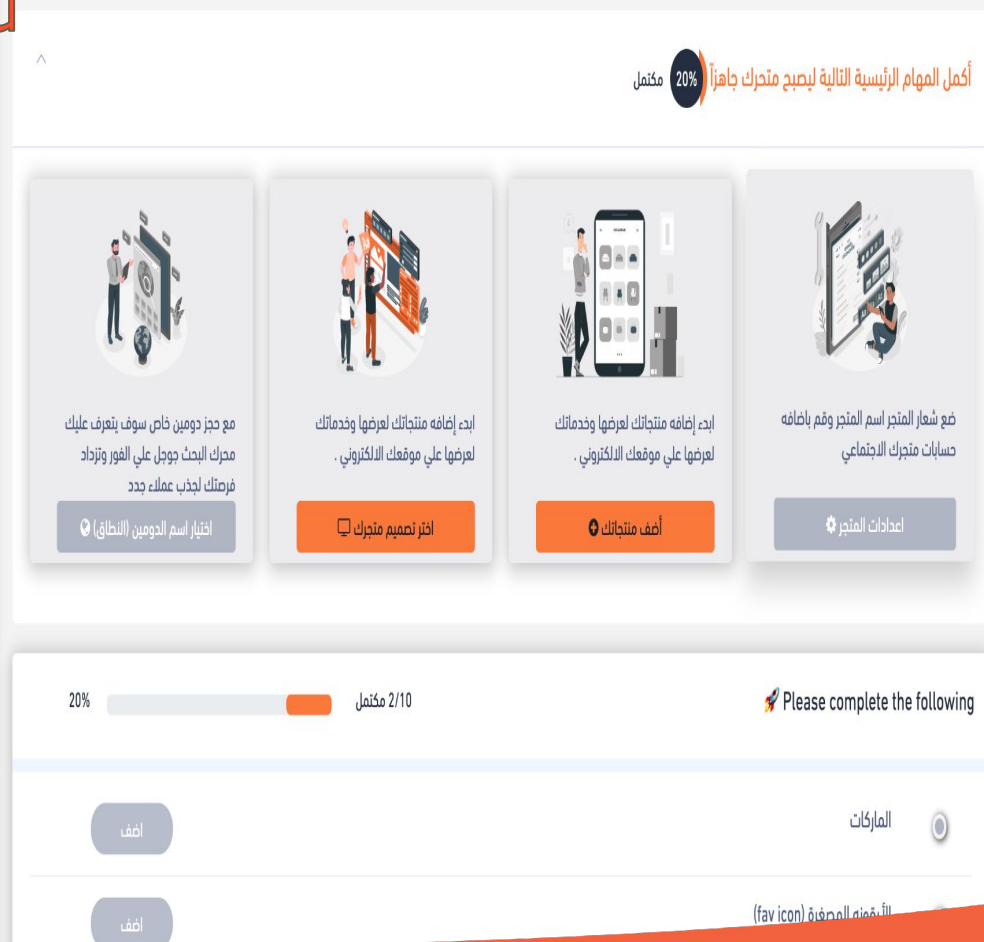

- The visitor can learn about the features of the platform and see the prices of the available packages.
- View platform news and developments in this period and in the future.
- Documentation to explaining the platform, text, images and videos.
- Create your store in steps not exceeding 60 seconds.
- User registration Log in to the store / Forgot password.
- Communicate with the technical support team through written chat or a special ticket for support or operation.

Store owner B2B / B2C BackEnd

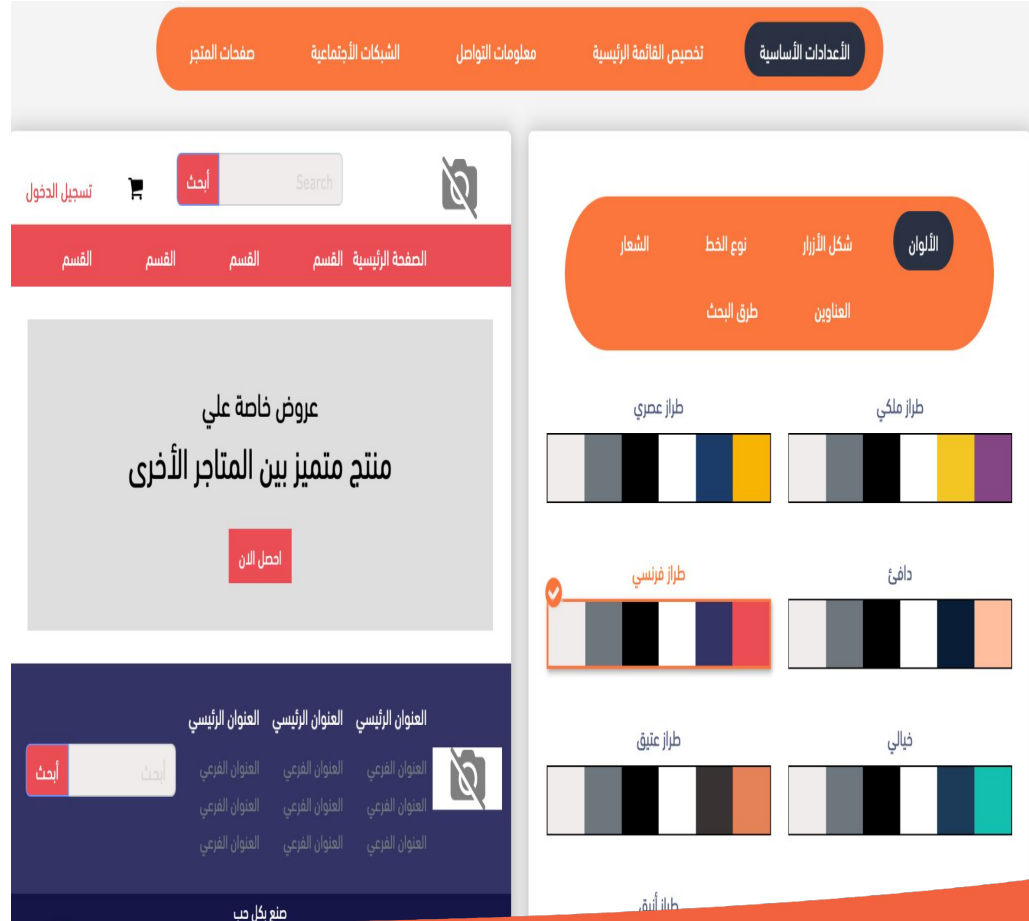

Just drag and drop to create your online store with our free, easy-to-use, no-code app builder. Jazz up your store with 80+ ready-to-use widgets.

- **Add products to your store:** adding one or more Product List elements to your store. You can include product images, options, and descriptions, and add a search bar to let customers easily explore your products (Sell your products- Collect registration fees - Accept donations for your charity - Book your services).
- **Sales Statistics:** The homepage displays current and past sales statistics, such as visits, sales, new customers, and returns, which helps users better analyze and understand store performance.
- **Stores types management:** The system allows users to manage warehouses efficiently and easily, as inventory can be added and modified and available inventory can be monitored.

Store owner B2B / B2C

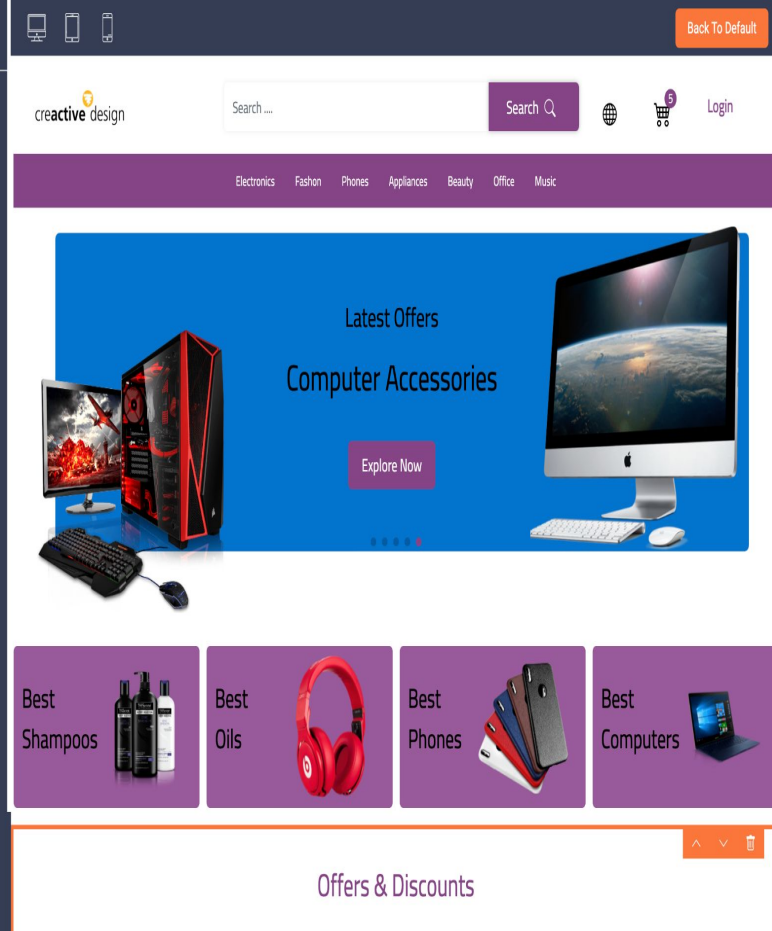

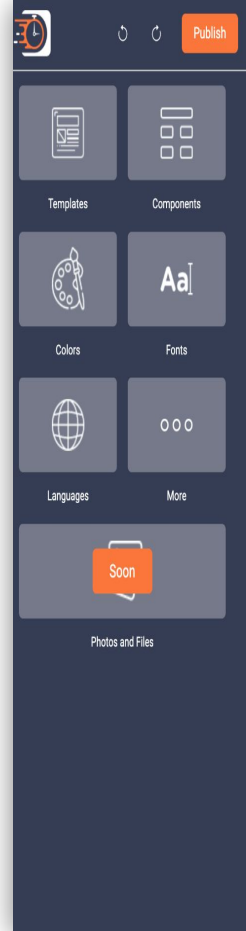

- **Customize your store to match your brand** : Make a personalized store app for your business with no coding required. Upload your logo, choose a color scheme, and add your products and pricing in minutes.
- **Dropshipping sites**: linking with them with ease and bringing products and adding them in sections to be presented to customers in a different, organized way.
- **Store additions**: It includes modifying the template for the store, choosing different plugins for payment and shipping methods, linking with social networking sites, adding a catalog and pixels, and linking with them with ease.
- **Billing services**: Creating invoices and managing payments efficiently and easily, as invoices can be created quickly and sent to customers via e-mail and linking with the Egyptian electronic billing system.
- **multi-language**: There are default languages, so the store manager can create a new language.

UI/UX control toolkit

60 Sec provided a valuable feature to users with its customized user interface and user experience toolkit. These tools provide the ability to customize the interface, improve user experience, and save time and resources. This feature can be used as a factor to attract investors and convince them of the importance of the 60 Seconds application and its added value to users and the market in general.

- **Interface Customization:** 60 Seconds allows its users to customize the interface of the application according to their needs and preferences. Users can use the Custom UI/UX Toolkit to add new buttons, menus, windows, and other custom elements to improve user experience without writing code.
- **Multiple choices :** included choosing between more than 15 templates and 200 different cutscenes that could be chosen to choose a user interface for his store individually.
- **Save time:** Using the Custom UI/UX toolkit helps save time needed to design your application's user interface. Users can use readily available tools to design the user interface that suits their needs without having to go through complex design processes.
